

## Projects for Regions and Municipalities

Ensure the highest possible quality of your schools.

In many countries, regions and municipalities are the guarantors of schools. Therefore, we offer our services to these entities and help them ensure the highest possible quality of their schools.

Local administrative authorities can thus obtain objective information about, for example, the quality of schools under their jurisdiction and for optimising the quality of their education networks.

Below you can find an example of projects that we have implemented for regions and municipalities in the Czech Republic:

### Evaluation and Self-assessment of Schools in Prague

A self-assessment project called **Formulation of Evaluation and Self-assessment Processes for Primary and Secondary Schools in Prague**.

This project is funded with financial resources from the European Social Fund, the state budget of the Czech Republic, and the Prague city budget. Its implementation is thus **free of charge** for schools.

#### Self-assessment in Prague

The aim is to determine the **relative advance of education** that primary schools in Prague provide to their students. Schools can also determine how to utilise **students' potential** by comparing the results of the Test of General Academic Prerequisites with tests in mathematics and the Czech language.

The project is being implemented in schools in two grade levels – in the 10-11 and 14-15 age groups.

Testing is conducted in two phases: **entrance testing for students** in one grade and **exit testing of these same students in the next grade**.

Testing of basic subjects (mathematics, native language) and General Academic Prerequisites provides schools, teachers and students with abundant information on the level of knowledge and skills and, subsequently, bases (and incentives) for improving education in the schools.
