

Online Courses for Schools

Enjoy the convenience of studying from anywhere and at any time over the internet!

Online Courses – Benefits

Unlike learning from textbooks, e-learning is much more fun and thus more efficient!

In 2007/2008 we are offering courses in Mathematics, Czech, Development of Academic Prerequisites, Biology, Law, and Mathematics in English.

With or without a teacher

Our online courses have been designed to be used both in the classroom by students alone and together with a teacher, and at home without a teacher's supervision. The teacher can check the progress of his/her students at any time via a special tutor's interface.

Tutor's interface

Thank's to the tutor's interface, teachers have an instant overview of all activities and the complete history of each student's work.

Complete coverage

Our e-learning courses provide complete coverage. The courses are sufficient for effectively preparing students for admission exams at Czech universities and secondary schools.

Internet-based mathematics course in English

This course was developed to meet the needs of elite schools that conduct lessons in the English language. In addition to detailed and entertaining study of mathematics, this course provides all children whose native language is not English with the possibility to practice their math skills and develop their knowledge of English at the same time.

Internet Courses for Teachers

E-learning can also be used for professional growth of your teachers and offers many advantages:

- it is significantly less expensive than classic training systems
- it does not cause teachers to be absent, and
- it makes it possible to customise the course to suit the identified needs of each participant.

Internet-based courses are also suitable for training your whole teaching staff.

All of our courses are accredited by the Czech Ministry of Education.

E-courses for Teachers – Benefits

Enhance teachers' professionalism

Teachers' professional development is one of the cornerstones of not only Czech education policy. We select topics which are crucial for modern schools and bring valuable new information and broaden current horizons.

Save on professional training

Internet-based courses bring considerable savings to your school's professional training budget. One internet course hour is only a third of the price of one standard presentation hour.

Enhance your teachers' IT literacy

E-learning is a modern teaching method, an added benefit of which is that it helps your teachers become familiar with the internet and computers, thus enhancing their IT literacy.
